

Patient Information	Specimen Information	Client Information

Test Name	In Range	Out Of Range	Reference Range	Lab
-----------	----------	--------------	-----------------	-----

HSV 1 IGG, TYPE SPECIFIC  
AB

<0.90	
Index	Interpretation
-----	-----
<0.90	Negative
0.90-1.09	Equivocal
>1.09	Positive

Index

This assay utilizes recombinant type-specific antigens to differentiate HSV-1 from HSV-2 infections. A positive result cannot distinguish between recent and past infection. If recent HSV infection is suspected but the results are negative or equivocal, the assay should be repeated in 4-6 weeks. The performance characteristics of the assay have not been established for pediatric populations, immunocompromised patients, or neonatal screening.
