

Patient Information	Specimen Information	Client Information

Test Name	In Range	Out Of Range	Reference Range	Lab
SYPHILIS ANTIBODY CASCADING REFLEX T. PALLIDUM AB	Negative		Negative	AMD

No antibodies to T. pallidum (the agent causing syphilis) were detected in the specimen. This result, however, does not exclude very recent T. pallidum infection; testing of a second specimen, collected 2-4 weeks after this specimen, is recommended if the index of suspicion for recent infection is high.
