Test Name	In Range	Out Of Range	Reference Range	Lab
D-DIMER, QUANTITATIVE		0.77 H	<0.50 mcg/mL FEU	

The D-Dimer test is used frequently to exclude an acute PE or DVT. In patients with a low to moderate clinical risk assessment and a D-Dimer result <0.50 mcg/mL FEU, the likelihood of a PE or DVT is very low. However, a thromboembolic event should not be excluded solely on the basis of the D-Dimer level. Increased levels of D-Dimer are associated with a PE, DVT, DIC, malignancies, inflammation, sepsis, surgery, trauma, pregnancy, and advancing patient age.
