

Patient Information	Specimen Information	Client Information

Test Name	In Range	Out Of Range	Reference Range	Lab
PARVOVIRUS B-19 ANTIBODIES (IGG, IGM)				NL1
PARVOVIRUS B19 ANTIBODY (IGG)	<0.9			

Reference Range
 <0.9 Negative
 0.9-1.1 Equivocal
 >1.1 Positive

IgG persists for years and provides life-long immunity.
 To diagnose current infection, consider Parvovirus B19 DNA, PCR.

PARVOVIRUS B19 ANTIBODY (IGM)	<0.9			NL1
-------------------------------	------	--	--	-----

Reference Range
 <0.9 Negative
 0.9-1.1 Equivocal
 >1.1 Positive

Results from any one IgM assay should not be used as a sole determinant of a current or recent infection. Because IgM tests can yield false positive results and low levels of IgM antibody may persist for months post infection, reliance on a single test result could be misleading. If an acute infection is suspected, consider obtaining a new specimen and submit for both IgG and IgM testing in two or more weeks. To diagnose current infection, consider parvovirus B19 DNA, PCR.
