Panel 163550

TESTS	RESULT	FLAG	UNITS	REFERENCE INTERVAL	LAB
<b>Panel 163550</b>					
HIV-2 Abs, EIA					01
HIV-2 Ab-O.D. Ratio	Negative			Neg:<1.00	01
<p>Interpretation: A repeatedly reactive HIV-2 result may indicate infection with HIV-2 virus. However, HIV1 positive patients (50-90%) may also react in HIV-2 EIA. Reactive results should be investigated by supplemental tests. Positive HIV-2 results should be considered indicative of infection if HIV-1 has been ruled out with negative HIV-1 testing, patient has epidemiological risk factors for HIV-2, and supplemental tests such as HIV-2 Immunoblot (Investigational use only) show the presence of HIV-2 specific viral bands.</p>
