11-dehydro TXB2/Creat Ratio

TESTS	RESULT	FLAG	UNITS	REFERENCE	INTERVAL	LAB
<b>11-dehydro TXB2/Creat Ratio</b>						
11-dehydro TXB2/Creat Ratio	2398		pg/mg creat			01
Interpretation:						01

Result >1500 pg 11dhTxB2 per mg creatinine: If the patient is on aspirin therapy a urinary level above 1500 pg 11dhTxB2/mg creatinine suggests an inadequate response to aspirin. This result is in the range of response that would be expected in an individual not on aspirin therapy. Poor aspirin response (resistance) is associated with a higher cardiovascular risk compared to good aspirin responders. In a patient compliant with aspirin therapy, they may benefit from further treatment or modification of cardiovascular risk factors. (McCullough PA et al. Am J Cardiol 2017;119:972-977.)
