Ordered Items

G-6-PD, Quant, Blood and RBC; Venipuncture

TESTS	RESULT	FLAG	UNITS	REFERENCE	INTERVAL	LAB
-------	--------	------	-------	-----------	----------	-----

G-6-PD, Quant, Blood and RBC						
RBC	4.66		x10E6/uL	3.77 - 5.28		02
G-6-PD, Quant	251		U/10E12 RBC	146 - 376		

Comment :

When decreased, G-6-PD, Quant. values are associated with acute hemolytic anemia when deficient individuals are exposed to oxidative stress, such as with certain medications (e.g., primaquine), infection, or ingestion of fava beans.
Caution: In patients with acute hemolysis (e.g., abnormally low RBC values), testing for G-6-PD may be falsely normal because older erythrocytes with a higher enzyme deficiency have been hemolyzed. Young erythrocytes and reticulocytes have normal or near-normal enzyme activity. Normal values of G-6-PD may be measured for several weeks following a hemolytic event.
