West Nile Virus Antibody,Serum

Test	Current Result and Flag	Previous Result and Date	Units	Reference Interval
West Nile Virus, IgG ⁰¹	Equivocal West Nile Virus IgG Antibody cannot be determined. Another specimen should be submitted for testing.			Negative
▶ West Nile Virus, IgM⁰¹	Positive Abnormal Positive for West Nile Virus IgM Antibody. A positive IgM result may not indicate a recent infection. IgM antibodies to WNV have been shown to persist in serum for more than 500 days. Serological cross-reactivity among flaviviruses (e.g. St Louis encephalitis and dengue viruses) is common. Cross-reactivity has been noted in specimens containing rheumatoid factor.			Negative

Disclaimer

The Previous Result is listed for the most recent test performed by Labcorp in the past 3 years where there is sufficient patient demographic data to match the result to the patient.
